

Transferring a Complete Denture to an Implant Screw Retained Transitional Prosthesis A Step by Step Hands –on Course

Dr. Evangelos Rossopoulos

Dr. Rossopoulos received his dental degree from the Aristotelion University of Thessaloniki (his hometown), Greece, in 1980. After practicing for a year at a remote mountain village, he decided to do a one-year General Dentistry residency at the world renowned Eastman Dental Center in Rochester, New York. He then went on and completed his three year prosthodontic residency and received his certificate in Prosthodontics. In addition, he joined the faculty and became a full time clinical instructor at the same institution until 1986 when he relocated to California and dedicated himself into his private practice. He was fortunate that Eastman Dental Center was chosen as one of the first few centers to introduce the concept of dental implants in the United States.

Since he had a great interest in the then “new” procedure, he became involved very early in the restoration of dental implants and has since placed numerous implant restorations for patients of all ages. Dr. Rossopoulos is a member of the American and International Colleges of Prosthodontists, American Prosthodontic Society and the California and American Dental Associations .He currently serves as a board member of the Tri-County Dental Society, and supports numerous local charities, such as the Corona Host Lions and Olive Crest.

Course Description

Hands on Component – Limited Space Available!

This presentation will provide a 25 year journey in restoring the edentulous patient with complete fixed dentures. Both delayed and immediate loading will be discussed. Several clinical cases will be presented as well as guidelines in developing up to date protocols and avoiding commonly made mistakes.

The hands-on course will include the transfer of an existing complete denture to an implant supported fixed transitional prosthesis. Both direct and indirect methods will be discussed. At the conclusion of the course each participant will be able to place temporary abutments onto several implants, attach them to full denture and finalize a fixed transitional prosthesis.
